

Drapery Sheer ClearStays Installation Instructions

ClearStays are used to improve performance of the Drapery Sheer Product. ClearStays are packaged in two sets: Intermediate ClearStays and Fabric Panel Connecting ClearStays. The Fabric Panel ClearStays that are to be used between connecting fabric panels will have a small set of Scotch-Mate on both the front and backside on the bottom of the ClearStay. These ClearStays will be packaged separately from intermediate ClearStays.

Intermediate ClearStays

1. Hold ClearStay upright with the punch end up and the curve facing to the right.

2. Bend tab out at an approximate 35° angle.

3. Starting on the left side of the shade, position the first clear stay approximately 1" below the top edge of the fabric panel and in front of the first and second billow separation.

4. Angle the top of the clear stay and insert it between the first and second billow separation.

5. Position the ClearStay between the two halves of the fabric hanger and below the notch in the back side of the fabric hanger.

6. Slide the top of the ClearStay up through the notch in the back of the fabric hanger so that the tab on the ClearStay fully clears the top edge of the Fabric Hanger.

7. Slide the ClearStay back down gently so that the tab on the ClearStay seats itself into the notch on the fabric hanger. Repeat steps 1-7 until end of the panel is reached.

Connecting Fabric Panels with ClearStays

ClearStays that are to be used between connecting fabric panels will have a small set of Scotch-Mate on both the front and backside on the bottom of the ClearStay. These ClearStays will be packaged separately from intermediate ClearStays.

8. Follow steps 1 - 7 and hang the Fabric Panel Connecting ClearStay between the first and second fabric panel. Remove the liner of the mating halves of the Scotch-Mate and the bottom of the ClearStay. Gently pull the slack out of the fabric and adhere the Scotch-Mate to the fabric for both sides of the ClearStay, connecting the two panels with the ClearStay. Repeat this step to adjoin all remaining panels.
